OPERATOR'S MANUAL

FOR MODEL EZ-3 and EZ-5

Simple Steam COUNTERTOP STEAMERS

Model EZ-3

Model EZ-5

№ WARNING

Improper installation, operation, service, or maintenance can cause property damage, injury, or death.

Read this manual thoroughly before installing and operating this equipment.

1100 Old Honeycutt Road, Fuquay-Varina, NC 27526 www.southbendnc.com

SAFETY PRECAUTIONS

Before installing and operating this equipment, be sure everyone involved in its operation is fully trained and aware of precautions. Accidents and problems can be caused by failure to follow fundamental rules and precautions.

The following symbols, found throughout this manual, alert you to potentially dangerous conditions to the operator, service personnel, or to the equipment.

<u></u> **∴** DANGER

This symbol warns of immediate hazards which will result in severe injury or death.

WARNING

This symbol refers to a potential hazard or unsafe practice which could result in injury or death.

<u>A</u> CAUTION

This symbol refers to a potential hazard or unsafe practice which could result in injury, product damage, or property damage.

NOTICE

This symbol refers to information that needs special attention or must be fully understood, even though not dangerous.

MARNINGFIRE HAZARD

For your safety, do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

Keep area around appliances free and clear of combustibles.

WARNING SHOCK HAZARD

Do not open panels that require use of tools.

Unit must be cleaned daily and properly maintained to reduce chances of unsafe operating conditions.

MARNINGBURN HAZARD

Watch for clogged drain - can crate burn hazard when door is opened.

Stand back when opening doors - hot steam or hot water may escape from steamer.

NOTICE

Be sure this Operator's Manual and important papers are given to the proper authority to retain for future reference.

Congratulations! You have purchased one of the finest pieces of heavy-duty commercial cooking equipment on the market.

You will find that your new equipment, like all Southbend equipment, has been designed and manufactured to meet the toughest standards in the industry. Each piece of Southbend equipment is carefully engineered and designs are verified through laboratory tests and field installations. With proper care and field maintenance, you will experience years of reliable, trouble-free operation. For best results, read this manual carefully.

RETAIN THIS MANUAL FOR FUTURE REFERENCE.

Parts	40

Read these instructions carefully before attempting installation. Installation and initial startup should be performed by a qualified installer. Unless the installation instructions for this product are followed by a qualified service technician (a person experienced in and knowledgeable with the installation of commercial gas an/or electric cooking equipment) then the terms and conditions on the Manufacturer's Limited Warranty will be rendered void and no warranty of any kind shall apply.

In the event you have questions concerning the installation, use, care, or service of the product, write to:

Southbend 1100 Old Honeycutt Road Fuguay-Varina, North Carolina 27526 USA

The serial plate is located on the right side of the unit near the back and top (see Figure 2 on page 7).

SPECIFICATIONS

DIMENSIONS

^{** &}quot;Pan Capacity" is the number of 1", 2.5", or 4" high standard pans (12" wide x 20" deep) that the steamer will hold.

IMPORTANT: UNIT MUST BE LEVEL FOR PROPER OPERATION. WARRANTY WILL BE VOIDED FOR IMPROPER INSTALLATION.

ELECTRICAL REQUIREMENTS

One fused electrical connection is required to the terminal block of the steamer. All units are shipped per customer order, three phase or single phase. (A kit is available for field conversion to three phase or single phase.) The fused connection must be wired for the required voltage and maximum amperage as listed in the chart below:

	Max. Amps per Line			
Total Connected Amps	EZ-3		EZ-5	
	1 Phase	3 Phase	1 Phase	3 Phase
208 V 60 Hz	40	24	57	33
220 V 50/60 Hz	38	23	54	31
240 V 60 Hz	35	21	49	29
380/220 V 50 Hz	23	14	31	19
415/240 V 50 Hz	21	13	29	17
480 V 60 Hz	18	13	25	15

INSTALLATION

. ! WARNING

DO NOT CONNECT 3/4" ID GREY HOSE IN REAR OF UNIT TO ANYTHING. THESE ARE VENT HOSES AND MUST BE ALLOWED TO DRAIN INTO PAN. FAILURE TO COMPLY COULD CAUSE A DANGEROUS PRESSURE RISE INSIDE OF THE STEAMER.

Do not locate unit adjacent to any high heat or grease producing piece of equipment, such as a range top, griddle, fryer, etc., that could allow radiant heat to raise the exterior temperature of the steam body above 130°F (54°C). DO NOT MOUNT ABOVE OTHER COOKING EQUIPMENT.

NOTICE

These installation procedures must be followed by qualified personnel or warranty will be void.

Local codes regarding installation vary greatly from one area to another. The National Fire Protection Association, Inc. states in its NFPA 96 latest edition that local codes are the "authority having jurisdiction" when it comes to installation requirements for equipment. Therefore, installations should comply with all local codes.

The unit, when installed, must be electrically grounded and comply with local codes, or in the absence of local codes with the National Electrical Code ANSI/NFPA 70-latest edition.

Canadian installation must comply with CSA-Standard (C22.2 No. 109-M1981 General Requirements-Canadian Electrical Code, Part II, 109-M1981) Commercial Cooking Appliances.

Step 1: Unpacking

IMMEDIATELY INSPECT FOR SHIPPING DAMAGE

All containers should be examined for damage before and during unloading. The freight carrier has assumed responsibility for its safe transit and delivery. If damaged equipment is received, either apparent or concealed, a claim must be made with the delivering carrier.

Apparent damage or loss must be noted on the freight bill at the time of delivery. The freight bill must then be signed by the carrier representative (Driver). If the bill is not signed, the carrier may refuse the claim. The carrier can supply the necessary forms.

A request for inspection must be made to the carrier within 15 days if there is concealed damage or loss that is not apparent until after the equipment is uncrated. The carrier should arrange an inspection. Be certain to hold all contents plus all packing material.

Step 2: Install the Legs

- 1. Uncrate carefully. Report any hidden damage to the freight carrier IMMEDIATELY.
- 2. Do not remove any tags or labels until unit is installed and working properly.
- 3. Remove placeholder bolts holding bottom cover onto unit and discard.
- 4. Screw legs into the bottom of the unit until approximately 1/4" of thread is showing. The legs with rubber suction cups go on the back of unit.
- 5. Slip drain pan guides into place between legs and bottom of steamer, as shown in Figure 1, making sure that pan stops are toward the rear of the unit.
- 6. Tighten legs, making sure that the pan guides stay seated against the leg threads.
- 7. To level the unit, adjust the base of unit's legs.
- 8. Place custom drain pan under unit.

NOTICE

Unit must be level to assure maximum performance. Improper leveling may void warranty.

! CAUTION

WATER FROM A FULL CAVITY CANNOT BE HELD IN A 12" x 20" X 21/2" PAN..

Step 3: Electric Connection

A field connection terminal block is located at the rear of the unit, lower left side. A hole is provided for a 3/4" conduit fitting (solid or flex). The rear cover must be removed to gain access to terminal block (see Figure 2).

Be sure that the input voltage matches the requirement on the serial plate. The unit is factory wired per customer order.

! WARNING

A POSITIVE GROUND CONNECTION IS ESSENTIAL. DO NOT ALLOW ANY TAMPERING OR ADJUSTMENT OF ANY CONTROL OR WIRING. THE UNIT IS FACTORY SET. ADJUSTING ANY INTERNAL COMPONENT CAN VOID THE WARRANTY.

THIS UNIT REQUIRES A KIT TO BE FIELD CONVERTED FROM THREE-PHASE TO SINGLE-PHASE OR VICE-VERSA. CONSULT FACTORY FOR PHASE CHANGES.

All 208-220-240 and 480 volt units will have three terminal block sections, "L1-L2-L3", for use with either 3-wire 3-phase or 2-wire, single-phase, 50 or 60 Hz. All 380V and 415V units will have four terminal block sections, "L1-L2-L3-N," for use with European style 4-wire 3-phase with neutral.

Step 4: Optional Floor Drain

The drain valve is 1/2" NPT. Position the unit near, but not on top of, an open floor drain. Allow at least a 1" air gap.

DO NOT directly plumb to the unit unless you also install an "open funnel" downstream of this connection in the drain system. The "open funnel" is intended to eliminate any water from entering the steamer because of a blocked drain. Any connection that allows the build-up of back pressure in the unit (such as a reduction in pipe size to a line smaller than 1/2"or a 90 degree angle in the line prior to the "open funnel" drain discharge point) may cause personal or property damage and will therefore void the warranty. (See Figure 3.)

Step 5: Check Installation

The following items should be checked within the first 30 days of operation by a qualified service technician.

- 1. Check doors for proper alignment.
- 2. Ensure proper opening and closing of doors.
- 3. Open door and remove cavity bottom cover, if present.
- 4. Ensure that the light comes on when lever is set to the "ON" position.
- 5. Pour approximately 2 gallons of water into trough, ensuring that the cavity bottom is covered.
- 6. An audible "click" should be heard when the door switch actuator rod is depressed and held. This indicates proper functioning of the contactor as it closes. Release rod.
- 7. Depress and hold the door switch for 2 minutes. The contactor should close when the switch is first depressed and stay closed during this period.
- 8. Close the door and wait approximately 12 minutes until the contactor opens, indicating the unit has reached operating temperature.

OPERATION

STARTUP

- 1. If the cavity bottom cover is present, open door and remove.
- 2. Turn lever to "ON" position with door open.
- 3. **Important:** Pour water into trough above the door until water is observed passing through the fill / drain opening at left rear corner of cavity bottom.
- 4. Add additional water through trough or through door up to "-WATER LEVEL-" mark (approximately 2 gallons to fill an empty unit).

NOTICE: WATER SPECIFICATION

To meet warranty requirements, supply water must meet the following specification:

Total Dissolved Solids (TDS)......60 PPM

Hardness 2 Grains or 35 PPM

pH Factor......7.0 to 7.5

- 5. Replace cavity bottom cover (if present).
- 6. Unit will be ready for cooking in approximately 12 minutes.

OPERATION

- 1. Suggested cooking times for various foods are shown in the table in the following section.
- 2. Pan specifications are shown on specifications page (page 4).
- 3. The door may be opened or closed at any time.
- 4. Unit will automatically idle at operating temperature when and if the door is closed and there is no food in the cavity.
- 5. Timer can be used as desired. However, it has no effect on unit operation.
- 6. Add proper amount of water through the trough (above the door) or directly through the door when water level is low.
- 7. If unit runs out of water the "CHECK WATER LEVEL" light will illuminate. Follow step # 6, above.

SHUTDOWN

- 1. The custom drain pan or a 12"x 20"x 4" non-perforated stainless steel pan should be located under the unit at all times.
- 2. Turn lever to the "OFF" position.
- 3. Empty drain pan after allowing water to cool.
- 4. Remove pan guides and cavity bottom cover (if present).
- 5. Wipe out steamer (with Lime-A-Way or equivalent deliming solution as necessary), RINSE THOROUGHLY WITH CLEAN WATER.
- 6. Ensure drain opening is clear.
- 7. Replace pan guides and cavity bottom cover (if present).
- 8. Leave the door open at night after cleaning.
- 9. DO NOT USE high-chlorine or bleach solution for cleaning the door gasket.
- 10. DO NOT USE steel wool or other metallic pads in the steamer.

COOKING HINTS

COOKING HINTS

COOKING TIPS

Schedule cooking of fresh vegetables so that they will be served soon after they are cooked. If it is necessary to prepare them in advance, they can be plunged into cold water, drained thoroughly and held under refrigeration until needed for service.

Five pounds of cold cooked vegetables can be reheated in the steamer in 5 to 10 minutes, depending upon the variety.

SUGGESTED COOKING TIMES

Timer settings are for general guidance only. Differences in food quality, size, shape, freshness, load size, and desired degree of doneness must be taken into consideration and adjustments made in time, if necessary.

Product	Weight	Portions	Cooking Time (minutes)	Pan Used
Asparagus				
Fresh	3½ lbs.	14 (4 oz.)	8-10	Full/Perforated
Frozen Spears (Thawed)	5 lbs.	20 (4 oz.)	9	Full/Perforated
Beans				
Green - Frozen, Cut	5 lbs.	20 (4 oz.)	12	Full/Perforated
Green - Fresh	5 lbs.	20 (4 oz.)	15-17	Full/Perforated
Wax - Frozen	5 lbs.	20 (4 oz.)	13	Full/Perforated
Lima - Frozen	5 lbs.	20 (4 oz.)	10	Full/Perforated
Broccoli				
Spears -Fresh	4 lbs.	16 (4 oz.)	10-12	Full/Perforated
Spears - Frozen (Thawed)	5 lbs.	20 (4 oz.)	8	Full/Perforated
Brussel Sprouts				
Fresh	5 lbs.	20 (4 oz.)	15-17	Full/Perforated
Fresh	5 lbs.	20 (4 oz.)	13	Full/Perforated
Carrots				
Frozen - Whole Baby	5 lbs.	20 (4 oz.)	12	Full/Perforated
Fresh - ¼-inch Bias Cut	5 lbs.	20 (4 oz.)	12	Full/Perforated
Cabbage				
Green, Cut Into Wedges		24	15	Full/Perforated
Red, Cut Into Wedges		16	18-20	Full/Perforated
Cauliflower				
Fresh, Whole	2 lbs.	8 (4 oz.)	9-10	Full/Perforated
Fresh, Whole	2 lbs. 12 oz.	11 (4 oz.)	15	Full/Perforated
Frozen, Flowerettes	5 lbs.	20 (4 oz.)	10-12	Full/Perforated
Corn				
Fresh, Cob, 4-5 Inch Ears	5½ lbs.	15	13-15	Full/Perforated
Frozen - Whole Kernel	5 lbs.	20 (4 oz.)	8	Full/Perforated
Frozen - Cob, 6 Inch Ears	9 lbs.	14	12-14	Full/Perforated

Table continues on next page.

MODEL EZ-3 & EZ-5 COUNTERTOP STEAMERS

Table continuing from previous page.

Product	Weight	Portions	Cooking Time (minutes)	Pan Used
Mixed Vegetables Frozen	5 lbs.	20 (4 oz.)	12	Full/Perforated
Peas Frozen	5 lbs.	20 (4 oz.)	8	Full/Perforated
Potatoes Red Bliss - Whole Russetts - Whole Russetts - Peeled Russetts 1-Inch Cubes	7 lbs. 8 lbs. 5 lbs. 5 lbs.	28 20 12 20 (4 oz.)	35 25-35 20 17	Full/Perforated Full/Perforated Full/Perforated Full/Perforated
Spinach Fresh, Leaf Frozen, Chopped	2½ lbs. 6 lbs.	10 (4 oz.) 24 (4 oz.)	5 35	Full/Perforated Full/Perforated
Zucchini Fresh - Slices 1/4-inch Thick	5 lbs.	20 (4 oz.)	6-8	Full/Perforated
Broccoli Spears -Fresh Spears - Frozen (Thawed)	4 lbs. 5 lbs.	16 (4 oz.) 20 (4 oz.)	10-12 8	Full/Perforated Full/Perforated
Eggs Large - Hard Cooked	12 lbs.	12	15-16	½ Perforated
Meats Corned Beef Hot Dogs, Thawed Hot Dogs, Frozen	6¾ lbs. 5 lbs. 5 lbs.	18 (6 oz.) 40 (2 oz.) 40 (2 oz.)	2 hours 5 10	Full Full/Perforated Full/Perforated
Fowl Boneless Chicken Breast	4½ lbs.	12 (6 oz.)	15	Full/Perforated
Tamales, Frozen Tortilla, Frozen 8-Inch	3 lbs. 4 Tortillas	12 (4 oz.) 4	20 45 Seconds	Full/Perforated Half/Perforated
Beef Ravioli, Frozen	48 Ravioli (1 lb. 8 oz.)	8	5-6	Full/Perforated
Elbow Macaroni	2 lbs. Uncooked	32 (2 oz.)	7	In Perforated Pan Nested in Solid Pan
Spaghetti	2 lbs. Uncooked	32 (2 oz.)	14	In 4-Inch Full/Perforated
Egg Noodles	2 lbs. Uncooked	32 (2 oz.)	10	Full/Perforated
Converted Rice	2 lbs. 2½ Qts. Water + Oil & Salt		25	Full/Perforated
Navy Beans Place beans in pan and cover with 3-quarts hot tap water. Steam for 2 minutes; remove from steamer and cover for 1 hour. Remove cover and place back in steamer for 40 minutes.	2 lbs.			Full/Perforated

Table continues on next page.

Table continuing from previous page.

Product	Weight	Portions	Cooking Time (minutes)	Pan Used
Black Eyed Peas Place beans in pan and cover with 3-quarts hot tap water. Steam for 2 minutes; remove from steamer and cover for 1 hour. Remove cover and place back in steamer for 35 minutes.	2 lbs.			Full/Perforated
Oysters	5 lbs.	16 Count	12	Perforated Pan Nested in Full Pan 2½-Inch Deep
Shrimp, Fresh, Medium, Heads Removed	5 lbs.		6-7	Full/Perforated
Shrimp, Frozen, Large, Peeled & Deveined	5 lbs.		8	Full/Perforated
Lobster	1¾ lbs.		8	Full/Perforated
Alaskan King Crab Legs	1 lb.		4-5	Full/Perforated
Cherrystone Clams	5 lbs.	12	7	Full/Perforated
Fish Fillets	7½ lbs.	12 (10 oz.)	18	Full/Perforated Nested in Full Hotel Pan

- For eggs cooked in the shell, adding salt to the cooking water increases cooking efficiency and decreases cooking time. If the egg cracks, the white is cooked at the crack and is sealed right away.
- To avoid green yolk (which is a deposit of iron sulfide) chill the eggs immediately after removing from the steamer by plunging them into a cold water bath (preferably containing ice).
- A quick and easy way to cook eggs for a salad mixture is to crack them directly into a solid steam table pan which has been lightly coated with salad oil. Do not mix. Steam until they are hard cooked. Remove and chop as you would for egg salad. The job of peeling is eliminated.
- Transfer steamed hot chicken to deep pan, cover with Cacciatore Sauce and finish in oven. Bake 20 to 30 minutes. May be held on steam table.
- Chicken, sausage, and/or fish may be browned in Infra-Red or Radiant Broiler after steaming by brushing with melted margarine mixed with salad oil to give a golden brown color.
- Save juices from steamed chicken or turkey to make soups, sauces, or casserole dishes.
- Chicken may be steamed in advance and refrigerated for next day's use. Be sure to bring product back to 180°F before serving.
- Save the juice from the corned beef. After the cabbage has been steamed, place it in a solid pan and add the juice for flavoring and holding on a steam table.
- Steaming brisket is a definite time saver. Boiling in water takes 40 to 50 minutes per pound. Using the Simple Steam can save 50% in cooking time.
- Cabbage, when steamed, retains its color and wedge identity. It will not break apart as it does when boiled in an open pot.
- When removing items prepared in a perforated pan, place a solid pan underneath the perforated pan with the cooked food in order to prevent dripping on the floor.
- The Simple Steam is designed to accept standard 12 x 20 pans. Fractional size pans and dishes can be used as well with the optional perforated shelf.
- For stirring, the pan does not have to be removed from the steamer. Pull pan 1/3 way out of the cavity and the entire surface is accessible.
- The door may be opened at any time during operation to remove or add food.

CI FANING

Southbend equipment is constructed with the best quality materials and is designed to provide durable service when properly maintained. To expect the best performance, your equipment must be maintained in good condition and cleaned daily. Naturally, the frequency and extent of cleaning depends on the amount and degree of usage.

Following daily and more extensive periodic maintenance procedures will increase the life of your equipment. Climatic conditions (i.e., salt air, seasonings, and water quality) may result in the need for more thorough and more frequent cleaning in order to keep equipment performing at optimal levels.

N WARNING: BURN HAZARD

For proper and safe operation, this steamer must be cleaned daily as described in this manual. Failure to do so could result in serious injury or damage.

Drains must be kept clean and clear of debris.

/!\ WARNING: SHOCK HAZARD

DO NOT GET WATER IN THE CONTROLS. This could result in expensive repairs and/or electrical shock.

De-energize all power to equipment before cleaning the equipment.

DAILY CLEANING

- 1. Turn lever to the "OFF" position.
- 2. Remove pan guides.
- 3. Clean all interior surfaces with soap, water, and a non-metallic pad. Occasional use of a deliming solution such as Lime-A-Way is recommended. RINSE THOROUGHLY WITH CLEAN WATER.
- 4. Ensure drain opening is clear.
- 5. Clean drain cover.
- 6. Replace pan guides.
- 7. Leave the door open at night after cleaning to prolong the life of the gasket.

PERIODIC CLEANING

- If lime or mineral deposit starts to build up in the interior, clean the unit by using Southbend "descaler" or other non-caustic deliming solution. Follow manufacturer's recommended procedures. Thoroughly rinse out unit with clean water.
- To remove normal dirt, grease, or product residue from stainless steel, use ordinary soap and water applied with a sponge or cloth. Dry thoroughly with a clean cloth. Never use vinegar or any corrosive cleaner.
- Occasionally drain rear water box. To remove grease and food splatter or condensed vapors that have baked on the equipment, apply cleanser to a damp cloth or sponge and rub cleanser on the metal in the direction of the polishing lines on the metal. Rubbing cleanser as gently as possible in the direction of the polished lines will not mar the finish of the stainless steel. NEVER RUB WITH A CIRCULAR MOTION. Soil and burnt deposits which do not respond to the above procedure can usually be removed by rubbing the surface with SCOTCH-BRITE scouring pads. DO NOT USE ORDINARY STEEL WOOL, as any

particles left on the surface will rust and further spoil the appearance of the finish. NEVER USE A WIRE BRUSH, STEEL SCOURING PAD, SCRAPER, FILE OR OTHER STEEL TOOLS. Surfaces which are marred collect dirt more rapidly and become more difficult to clean. Marring also increases the possibility of corrosive attack. Refinishing may then be required.

SEMIANNUAL CLEANING

At least twice a year, have your Southbend Authorized Service Agency or another qualified service technician clean and adjust the unit for maximum performance. Semiannual cleaning should include the following:

- 1. Remove rear cover.
- 2. Place a (1) gallon container under the water seal box drain valve (see Figure 18 on page 29).
- 3. Open drain valve, and close valve when box is finished draining.
- 4. Add one gallon of deliming solution to the trough above the door.
- 5. Add two gallons of deliming solution through the door into the cavity
- 6. Turn unit on, let run for 30 minutes.
- 7. Turn unit off and drain all solution from the cavity.
- 8. Drain solution from water seal box as in steps 2 and 3.
- 9. Fill unit with clean water THROUGH THE TROUGH and drain. Repeat 2 times.

Consult the Southbend Authorized Parts/Service Distributor list for the Authorized Service Representative in your area or contact Southbend at 1-800-348-2558 for this information.

This section contains a troubleshooting flowcharts, procedures, and electric schematics to assist a qualified service technician in the servicing of a EZ-3 or EZ-5 Countertop Steamer.

TROUBLESHOOTING FLOWCHARTS

Find the symptom below that corresponds to the malfunction, then turn to the corresponding figure and page. Follow the flowchart on that page until the problem is solved.

Symptom	Page	
Unit Not Heating Up, "ON" Light Not Lit	16	
Unit Not Heating Up Properly or Not Cooking As Fast, "ON" Light Lit	17	
Unit Using Excessive Amount of Water and/or Excessive Steam Coming from Vent Tube	18	
"Check Water Level" Light Does Not Come On When Unit Runs Out of Water	18	
Buzzer Does Not Come On	19

Figure 4 Unit Not Heating Up, "ON" Light Not Lit Unit not heating up, "ON" light not lit. Check that circuit breaker is "ON" and that proper voltage is available at terminal block. (For units with a fuse block, check for proper voltage at both ends of each fuse. Replace as necessary.) **DISCONNECT POWER AT CIRCUIT BREAKER** Remove control panel without disconnecting plug. Turn lever to "ON" position. * Reconnect power. Check voltage between "D" and "E" on control panel fuse block (see Figure 10 on page 21). Does voltage meet Yes specifications? Check voltage between "A" and "B" on control panel **DISCONNECT POWER AT CIRCUIT BREAKER** fuse block (see Figure 9 on page 20). Check wires L1 and L3 between terminal block and contactor Replace if no continuity. Does voltage meet specifications? **DISCONNECT POWER AT** Check voltage between "C" **CIRCUIT BREAKER** and "D" on control panel fuse block (see Figure 9 on page 20). Check wires between contactor and "A" and "B" on control panel fuse block. Replace as necessary Does voltage meet Yes specifications? Check for short circuit in Check voltage across terminals 1 and 6 of terminal block power switch (see Figure 12 (see Figure 9 on page 20). on page 23), contactor coil and MOV (see Figure 13 on page 24), IF idle element (see Figure 14 on page 25), Does voltage meet No -- Yes and buzzer (see Figure 15 on specifications? page 26). Replace as necessary. Replace "ON" Light (follow Test power switch (see Figure 12 on page 23); procedure in Figure 6 on Replace control panel fuses. replace if necessary. Check page 18). that switch is actuated properly by cam on valve shaft; adjust if necessary.

Figure 9

Voltage Check at Control Panel Fuse Block

TROUBLESHOOTING

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel without disconnecting plug.
- 3. Turn lever to "ON" position.
- 4. Reconnect power.
- 5. Place leads as shown.
- 6. Check voltage.

Figure 10 -

Heating Element Resistance Check (at contactor)

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel.
- 3. Place test leads between terminals A and C on left side of contactor.
- 4. Check the resistance and compare to the allowable range in the following table:

Voltage	Model EZ-3 Allowable Resistance (Ohms)	Model EZ-5 Allowable Resistance (Ohms)
208	8 to 16	6 to 12
220	9 to 18	7 to 13
240	11 to 21	8 to 15
380	28 to 53	21 to 39
415	34 to 63	24 to 46
480	45 to 84	33 to 61

5. Check resistance between terminals A and B and between terminals B and C similarly.

Figure 11 -Main Fuse Replacement (for units built before July 1, 2002) Fuse Block Fuse Block Cover (shown removed) Rear Cover 1. Disconnect power at circuit breaker. 2. Remove rear cover from unit. 3. Remove fuse block cover. 4. Check fuses for continuity.

5. Replace as necessary.

Figure 12

Power Switch Continuity Check

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel.
- 3. Turn Lever to "ON" from "OFF" and to "OFF" from "ON" ensuring that the power switch is properly actuated.
- 4. Remove power switch lead wires from fuse block (note wire locations).
- 5. Place test leads on "C" and "NO" lead wires as shown.
- 6. Check for continuity with lever in "OFF" position (there should be no continuity).
- 7. Check for continuity with lever in "ON" position (there should be continuity).
- 8. Repeat steps 5 7 with test leads between other pair of "C" and "NO" lead wires.
- 9. Place one test lead on "NO" lead wire and other test lead on other "NO" lead wire.
- 10. Check for continuity with lever in "ON" position and then with lever in the "OFF" position (there should be no continuity when the lever is in either position).
- 11. Reconnect wires or replace switch as necessary.

Figure 13 -

Contactor Coil and MOV Check

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel and disconnect nine-pin plug PL1.
- 3. Depress actuator on top of contactor. Actuator should travel freely and spring back when released.
- 4. Check for continuity between contacts A and D as shown in top view. There should be no continuity.
- 5. Repeat Step 4 for contacts B and E and for contacts C and F.
- 6. Place test leads on contactor coil terminal as shown in left side view.
- 7. Check resistance.
- 8. If resistance is not approximately 390 (+/- 40) ohms, remove MOV and recheck coil resistance. If resistance is now approximately 390 (+/-40) ohms, replace MOV, otherwise replace contactor.
- 9. Reconnect all wires.

Figure 14 -

Idle Element Resistance Check (for units built before January 15, 2001)

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel.
- 3. Disconnect idle element plug (PL3).
- 4. Place test leads as shown above.
- 5. Check to see if resistance is within +/- 10% of values in the following table:

Voltage	Model EZ-3 Resistance (Ohms)	Model EZ-5 Resistance (Ohms)
208	115	87
220	129	97
240	154	115
380	385	289
415	459	344
480	614	461

6. Remove one test lead, place on ground, check for short circuit.

Figure 15 -

Timer and Buzzer Check

TROUBLESHOOTING

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel.
- 3. Set timer for one minute and allow to time out. If timer does not run, then replace.
- 4. Remove buzzer lead wires from timer and terminal block position 6, as shown.
- 5. Place test leads between positions 1 and 3 on the timer.
- 6. Check for continuity. If no continuity, replace timer.
- 7. Place test leads in terminals of buzzer lead wires.
- 8. Check physical condition of buzzer.
- 9. Check that resistance is approximately 3.4Kohms. Otherwise, replace buzzer.

Figure 16

Door Switch Continuity Check (for units built before January 15, 2001)

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel.
- 3. Depress and release door switch actuator rod to make sure door switch is properly actuated.
- 4. EZ-3: Remove door switch lead wires from terminal block positions 2 and 3, or EZ-5: Remove door switch lead wires from terminal block position 1 and terminal 2 of the controller.
- 5. Place test lead as shown inside the terminal connectors of the lead wires.
- 6. Check for continuity (there should be NO continuity).
- 7. Depress door switch actuator rod and check for continuity (there should be continuity).

Figure 17 -

Door Switch Continuity Check (for units built after January 15, 2001)

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel.
- 3. Depress and release door switch actuator rod to make sure door switch is properly actuated.
- 4. Remove door switch lead wires from terminal block position 1 and terminal 8 of the controller.
- 5. Place test lead as shown inside the terminal connectors of the lead wires.
- 6. Check for continuity (there should be NO continuity).
- 7. Depress door switch actuator rod and check for continuity (there should be continuity).

Figure 18 -**Float Switch Continuity Check**

Float Tube Water Seal Box Assembly Drain Valve 9 0 Water Passages Float Switch Coupling Float Tube Rear View of Unit with Back Cover Removed

- 1. Disconnect power at circuit breaker.
- 2. Remove rear cover from unit.

Assembly

- 3. Disconnect 2 pin float switch plug from mating plug on back of unit (PL2).
- 4. Drain water seal box by opening 3/8" drain valve on box.
- 5. Remove float switch from box by removing float switch fitting from coupling on box.
- 6. Make sure float travels freely along stem.
- 7. Place test leads in float switch connector as shown.
- 8. Hold float switch in same orientation as when installed.
- 9. Check continuity. There should not be continuity.
- 10. Flip float switch over.
- 11. Check for continuity. There should be continuity. Replace as necessary.
- 12. Check 0.060 water passages in float tube. Clean if necessary.

Figure 19

High Limit Continuity Check (for units built before January 15, 2001)

- 1. Turn unit off.
- 2. Wait for cavity bottom to cool to touch.
- 3. Disconnect power at circuit breaker.
- 4. Remove control panel without disconnecting plug.
- 5. EZ-3: Remove wires C16 and C19 from terminal block positions 1 and 2, as shown; or EZ-5: Remove wires C58 and C59 from terminal block positions 5 and 6, as shown.
- 6. EZ-3: Place test leads as shown inside the terminal connectors of wires C16 and C19, or EZ-5: Place test leads as shown inside the terminal connectors of wires C58 and C59.
- 7. Check for continuity.
- 8. If no continuity, disconnect each high limit switch individually and check for continuity. Replace switches that do not have continuity. (See Figure 14 on page 25 for typical high limit switch location.)
- 9. EZ-3: Reconnect wires C16 and C19; or EZ-5: Reconnect wires C58 and C59.
- 10. Reconnect power at circuit breaker.

Figure 20 -

High Limit Continuity Check (for units built after January 15, 2001)

- 1. Turn unit off.
- 2. Wait for cavity bottom to cool to touch.
- 3. Disconnect power at circuit breaker.
- 4. Remove control panel without disconnecting plug.
- 5. Remove wires B559 and B658 from terminal block positions 5 and 6, as shown.
- 6. Place test leads as shown inside the terminal connectors of wires B658 and B559.
- 7. Check for continuity.
- 8. If no continuity, disconnect each high limit switch individually and check for continuity. Replace switches that do not have continuity. (See Figure 14 on page 25 for typical high limit switch location.)
- 9. Reconnect wires B658 and B559.
- 10. Reconnect power at circuit breaker.

Figure 21 -

Time Delay Relay Check (for EZ-3 units built before January 15, 2001)

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel, but leave plugged in.
- 3. Disconnect wire C23 from terminal block position 3.
- 4. Reconnect power.
- 5. Depress and hold door switch. Contactor should actuate and then deactuate in approximately 60 seconds.
- 6. If contactor fails to actuate or actuates but fails to deactuate, check potentiometer on top of time delay relay. Make sure potentiometer is seated properly on time delay relay terminal and make sure it is set to 60.
- 7. Depress door switch again. If contactor still fails to actuate and deactuate properly, replace time delay relay.

Figure 22

Controller Check (for all EZ-5 units and for EZ-3 units built after Jan. 15, 2001)

	EZ STEAMER LOGIC CHART				
Step	Door Switch (SW2) #8	Float Switch (SW1) #7-#9	Contactor Heaters (Load 2) #5	Notes	
1	Door Open	No Pressure, Up Position Switch Closed	Heaters Off		
2	Door Open to Close	No Pressure, Up Position Switch Closed	Heaters On for 60 Seconds, then Step 3 or 4	Even if float switch opens with pressure.	
3	Door Closed	No Pressure, Up Position Switch Closed	Heaters On		
4	Door Closed	Pressurized, Down Position Switch Open	Heaters Off		
5	Normal Cycle Operation Door Closed	When Pressure Drops, Goes to Up Position, Switch Closes	Heaters On for 10 Seconds, then Step 3 or 4	Even if float switch opens with pressure.	

- 1. Disconnect power at circuit breaker.
- 2. Remove control panel, but leave plugged in.
- 3. Disconnect wire C98 from controller.
- 4. Reconnect power.
- 5. Use a spacer to hold door switch in closed position. Contactor should actuate and then deactuate in less than 60 seconds.
- 6. If contactor fails to actuate (or actuates but fails to deactuate), replace controller.
- 7. With spacer still in place and door open, momentarily reconnect wire C98 and then disconnect.
- 8. Controller should actuate, then deactuate 10 seconds after C98 is disconnected.
- 9. If contactor fails to actuate (or actuates but fails to deactuate), replace controller.

PARTS

NOTICE

INSTALLATION OF OTHER THAN GENUINE SOUTHBEND PARTS WILL VOID THE WARRANTY ON THIS EQUIPMENT.

The serial plate with voltage, model, and serial information is located on the right side of the steamer cavity on the upper rear corner. On single units a second tag is located on the face of the door which will show only model and serial number. On tandem units, a second tag is on the right side of the right unit and the left side of the left unit.

Replacement parts may be ordered either through a Southbend Authorized Parts Distributor or a Southbend Authorized Service Agency.

When ordering parts, please supply the Model Number, Serial Number, Part Number, Description, Finish, and Electrical Characteristics as applicable.

For parts not listed, consult a Southbend Authorized Parts Distributor or Southbend Authorized Service Agency. Consult the Southbend Authorized Parts/Service Distributor list for the Authorized Parts supplier in your area.

MODEL EZ-3 and EZ-5 SIMPLE STEAM COUNTERTOP STEAMERS

A product with the Southbend name incorporates the best in durability and low maintenance. We all recognize, however, that replacement parts and occasional professional service may be necessary to extend the useful life of this unit. When service is needed, contact a Southbend Authorized Service Agency, or your dealer. To avoid confusion, always refer to the model number, serial number, and type of your unit.

Southbend
1100 Old Honeycutt Road, Fuquay-Varina, NC 27526
